

Partnership in alloys

Aluminium based master alloys

Aluminium

Aluminium-Antimony 8%, 10%, 15%	Aluminium-Manganese 10%, 15%, 20%, 25%, 30%, 60%, 80%
Aluminium-Beryllium 2.5%, 5%	Aluminium-Molybdenum 10%
Aluminium-Bismuth 10%	Aluminium-Nickel 20%, 50%
Aluminium-Boron 3%, 4%, 5%, 6%, 8%, 10%	Aluminium-Niobium 10%
Aluminium-Calcium 5%, 6%, 10%	Aluminium-Scandium 2%
Aluminium-Cerium(MM) 10%	Aluminium-Silicon 20%, 25%, 30%, 50%
Aluminium-Chromium 5%, 10%, 15%, 20%, 80%	Aluminium-Silver 10%, 50%
Aluminium-Cobalt 5%, 10%	Aluminium-Strontium 3.5%, 5%, 10%, 15%
Aluminium-Copper 30%, 33%, 50%, 80%	Aluminium-Strontium-Titanium-Boron
Aluminium-Copper-Phosphorus	Aluminium-Titanium 5%, 6%, 10%, 80%
Aluminium-Indium 5%, 10%	Aluminium-Titanium-Boron 5/1, 3/1, 5/0.2 etc.
Aluminium-Iron 10%, 20%, 25%, 30%, 45%, 80%	Aluminium-Titanium-Carbon 3/0.15
Aluminium-Iron-Phosphorus	Aluminium-Yttrium 10%
Aluminium-Lanthanum 10%	Aluminium-Vanadium 5%, 10%
Aluminium-Lithium 2%, 5%	Aluminium-Zinc (various compositions)
Aluminium-Magnesium 20%, 25%, 50%, 65%, 75%	Aluminium-Zirconium 5%, 6%, 10%, 15%
Aluminium-Magnesium-Boron	Rod Feeder (variable speed)
Aluminium-Magnesium-Silicon	

Physical form: ingots, waffle plates, lumps, coiled rod, cut rod, conticast, splatter (flakes), tablets and briquettes.
